Art Unit: 1647

## Election/Restriction

1. Claims 1-14 are pending.

## Improper Markush

- 2. Prior to setting forth the restriction requirement, it is pointed out that applicants have presented instant claims in improper Markush format, see Ex parte Markush, 1925 C.D. 126, In re Weber, 198 USPQ 334 and MPEP 803.02 and 806.04. The claims are improperly set forth as the genus claims encompass multiple products, as identified and claimed, and fail to share the characteristics of a genus, i.e., a common utility and a substantial structural feature essential to the disclosed utility. Alternatively, the claims define multiple structurally distinct compounds capable of different use, with different modes of operation, different function and different effects. A reference against one of the claimed components or methods would not be a reference against the other. Therefore, the restriction will be set forth for each of the various groups, irrespective of the improper format of the claims, because the claims define inventions that are not proper species.
- 3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 5-9, drawn to a kit, classified for example in class 530, subclass 387.1.
- II. Claims 1-4, and 13 in part drawn to a method for diagnosis via antibodies and determining the presence of thrombospondin, classified for example in class 435, subclass 7.1.
- III. Claims 1-4, and 14 in part drawn to a method for diagnosis via autoantibodies against thrombospondin antibodies and determining the presence of thrombospondin, classified for example in class 435, subclass 7.1.

Art Unit: 1647

IV. Claim 10-13, in part drawn to a process for the determination of dementia via an antibody and determinable group separated off, classified for example in class 435, subclass 6.

- V. Claim 10-12, and 14 in part drawn to a process for the determination of dementia via an autoantibody against thrombospondin antibodies and determinable group separated off, classified for example in class 435, subclass 6.
- 4. The inventions are distinct, each from the other because of the following reasons:
- 5. Inventions II-V are related as processes. The processes are distinct each from the other as the processes differ in reagents, steps, functions and effects.
- 6. Inventions I and II-V are related as products and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the processes for using the products as claimed can be practiced with another materially different product or (2) the products as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the processes for using the different antibodies can be practiced with alternative antibodies or autoantibodies and the products as claimed can be used alternatively in a method of treatment, a method of inhibiting assembly, a method of making, a method of modulating cellular response, a method of screening compounds, and a method for detecting compositions.
- 7. The inventions are distinct, each from the other because of the following reasons:
- 8. Restriction is deemed to be proper because the products indicated constitute patentably distinct inventions for the following reasons. Each of the antibodies or autoantibodies has a unique structural feature which requires a unique search of the prior art. The inventions indicated differ in structure and function as they are composed of divergent structure and are

Art Unit: 1647

differentially able to hybridize, bind or mediate biological functions. A reference to one element would not constitute a reference to another. In addition, searching all of the molecules in a single patent application would provide an undue search burden on the examiner and the USPTO's resources because the indicated searches are not co-extensive.

- 9. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 10. Because these inventions are distinct for the reasons given above and the search required for any Group is not required for any other Group, restriction for examination purposes as indicated is proper.
- 11. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 12. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 13. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

14. Any inquiry of a general nature or relating to the status of this general application should be directed to the Group receptionist whose telephone number is (703) 308-0196.

Papers relating to this application may be submitted to Technology Center 1600, Group 1640 by facsimile transmission. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). Should applicant wish to FAX a response, the current FAX number for Group 1600 is (703) 308-4242.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sharon L. Turner, Ph.D. whose telephone number is (703) 308-0056. The examiner can normally be reached on Monday-Thursday from 8:00 AM to 6:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Kunz, can be reached at (703) 308-4623.

Sharon L. Turner, Ph.D.
